

Business

Work smarter, not harder

SAMSUNG

Give everyone the tools they need to do their best work

57% of workers struggle with weekly technology issues, and 17% have either quit or are considering quitting because of it¹

We can help

In collaboration with Samsung, we're giving people the tools they need to connect, collaborate and stay productive wherever they choose to log on.

But what does that look like in the real world? Here are some typical use cases across a range of industries.

Empowering professional services with ready-to-go devices

For a firm of professional services looking to scale up projects, upgrading to more powerful devices is not just a choice, it's a necessity.

But they can't afford to waste time on new software configurations and lengthy hardware setups.

Our solution?

The latest devices preconfigured and ready to go straight out of the box save valuable time and keep everyone productive.

Giving field engineers a connectivity boost

For utility companies, timely and efficient service is essential.

They can't risk field engineers struggling with unreliable connections or having to make return trips to headquarters.

Our solution?

Lightning-fast WiFi and mobile connections enable field engineers to connect to vital platforms on the go ensuring great service without interruption.

Did you know?

Using the Samsung S Pen, Officers can gather witness statements and signatures on the spot, saving them a trip back to base.

Did you know?

Samsung Rugged devices have fast-charging, replaceable batteries so field engineers can power through every day without costly downtime.

Helping police stay on task with remote device management

A local police force grapples with a common challenge: juggling operational priorities while ensuring officers' devices are up-to-date.

Manual updates are a bottleneck. They take up valuable time, disrupt workflows and compromise productivity.

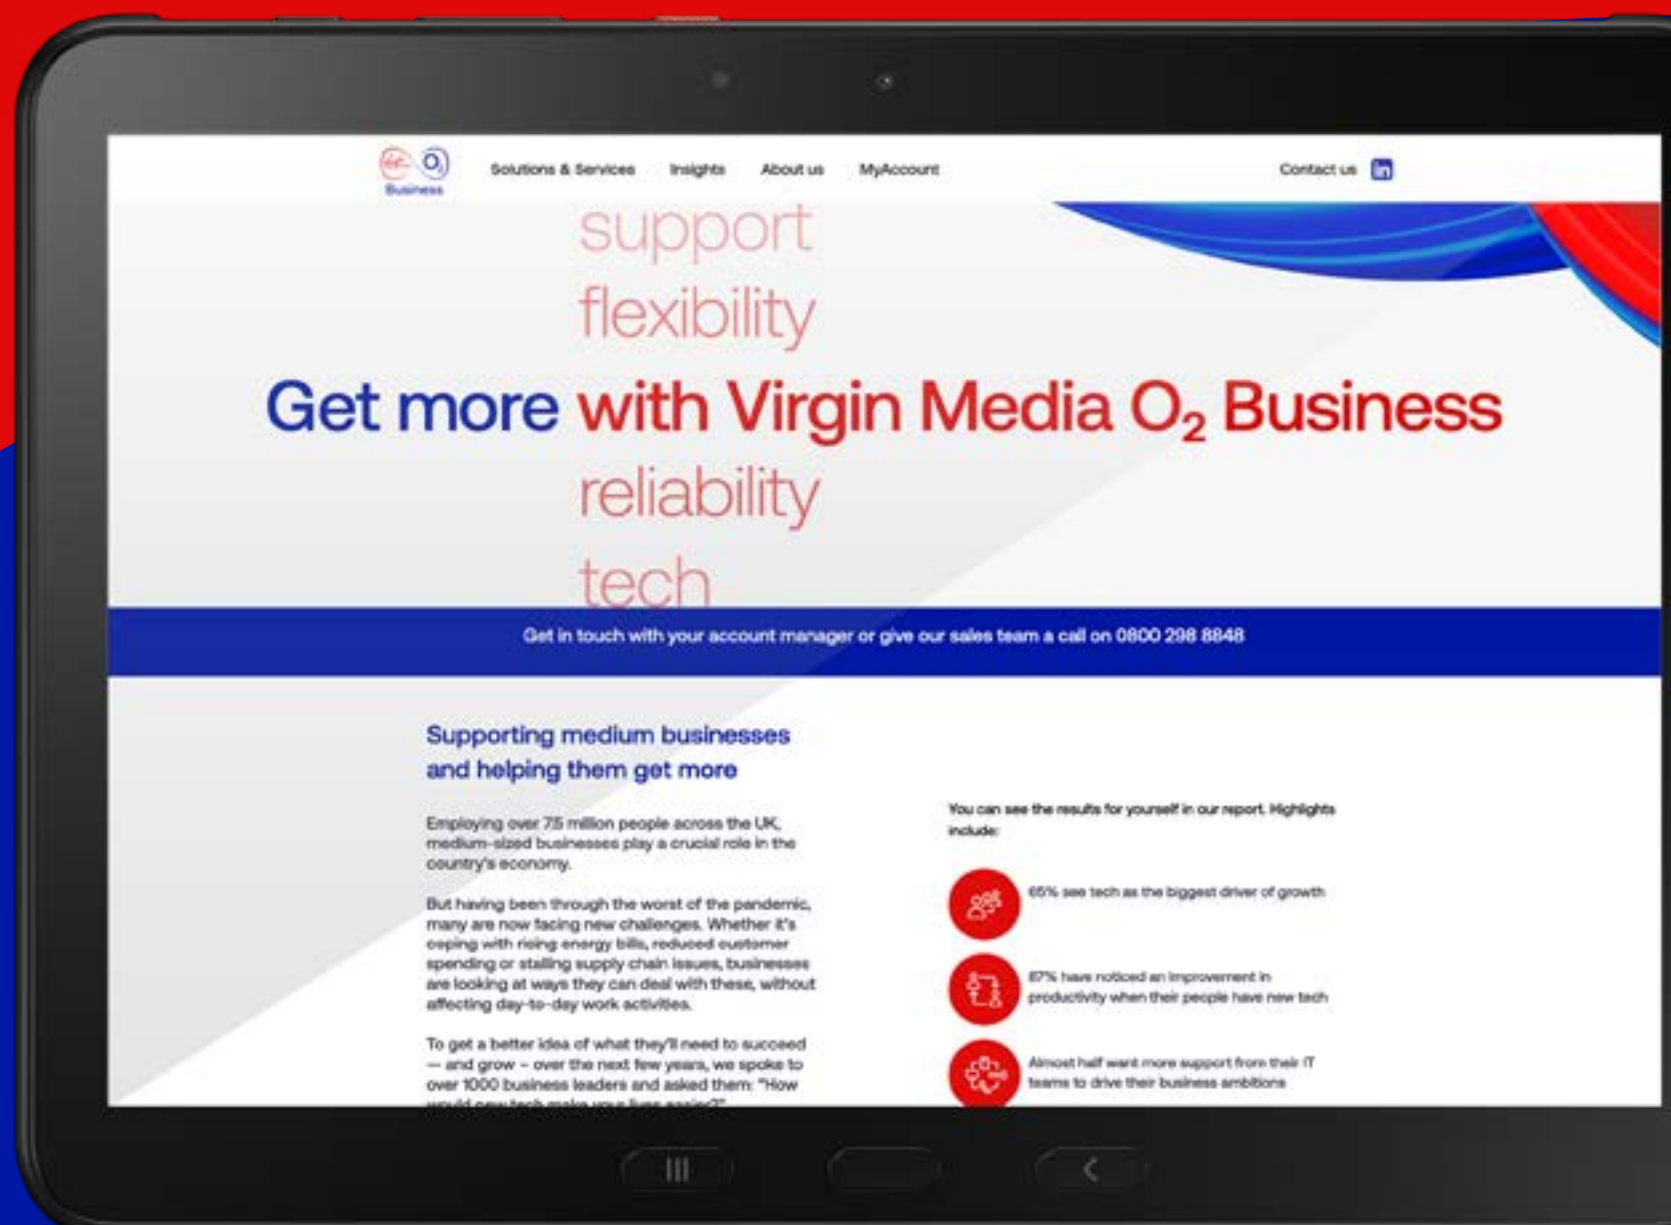

Our solution?

Remote management tools enable station IT to deploy updates and patches in the background so every officer stays focused on what matters: their mission-critical duties.

Let's help your people get more done
